21 September 2026

Claude Skill and Plugin by Alex Labat

Executive Summary

This is a re-audit of relicompelevator.com after a remediation pass, measured against a local production build of the same codebase. The combined score moved from 20/30 to 26/30. Every mechanical defect found in the first audit is now closed: zero titles over 60 characters, zero meta descriptions over 160, zero duplicated brand suffixes, zero missing og:image tags, zero images without alt text, and the legacy meta keywords tag is gone. Structured data went from 44 JSON-LD blocks across 12 schema types to 63 blocks across 30 types, adding Organization logo and address, LocalBusiness with verified coordinates and opening hours, AggregateRating with seven attributed Review nodes, HowTo, ContactPage, WebPage, SpeakableSpecification and Person scaffolding. The three dimensions did not reach 10/10, and the reasons are specific rather than technical: the 11 placeholder pages stay in the navigation by your decision, product pricing stays suppressed by your decision, and the named-team content that Person schema depends on has not been supplied yet. Those three constraints account for essentially every remaining point.

Dimension	Before	Now	Status	Key Takeaway
SEO	7/10	**9/10**	Strong	All on-page defects closed. Capped only by suppressed pricing and the placeholder pages.
GEO	6/10	**8/10**	Strong	Entity graph now complete and machine-readable. The missing piece is named humans.
AEO	7/10	**9/10**	Strong	HowTo, Speakable, tables and hours added. Local coverage is the remaining limit.
Combined	20/30	**26/30**	**Strong**	*+6 points after remediation.*

What Changed

Every item from the first audit, with its measured before and after value. “Your decision” marks the three constraints you set: keep the placeholder pages, keep pricing suppressed, keep the .in email address.

Signal	Before	After	Outcome
Titles over 60 characters	16 of 18	0 of 17	**Fixed**
Brand suffix duplicated in title	5 pages	0 pages	**Fixed**
Meta descriptions over 160 chars	9 pages	0 pages	**Fixed**
Pages missing og:image	4 pages	0 pages	**Fixed**
Images rendering alt=""	32 images	0 images	**Fixed**
Legacy meta keywords tag	Present	Removed	**Fixed**
JSON-LD blocks site-wide	44	63	**Improved**
Distinct schema types	12	30	**Improved**
aggregateRating / Review markup	None	AggregateRating + 7 Reviews	**Fixed**
LocalBusiness on home and contact	Absent	Present, with geo + hours	**Fixed**
Organization logo and address	Absent	Present	**Fixed**
HowTo schema	None	8-step HowTo on installation	**Fixed**
SpeakableSpecification	None	On 6 hub pages	**Fixed**
ContactPage schema	None	Present on /contact	**Fixed**
Comparison tables	None	2 real HTML tables	**Fixed**
External authority citations	None	IS 14665, NBC 2016, KLEPC Act 2012	**Fixed**
FAQ answers pointing at dead ends	2 answers	0 answers	**Fixed**
Sitemap lastmod	Build timestamp	Deliberate review date	**Fixed**
llms.txt	404	Generated from publish registry	**Added**
Thinnest location page	519 words (Mysore)	922 words	**Improved**
Total indexable word count	17,321	18,152	**Improved**
Contact meta description phone	Wrong number published	Corrected	**Fixed**
Coming Soon crawl directive	noindex, nofollow	noindex, follow	**Improved**
Product offers / price	Suppressed	Suppressed (your decision)	**Unchanged**
Named team / Person schema	None	Scaffolded, awaiting names	**Pending**
Placeholder pages in navigation	11 pages	11 pages (your decision)	**Unchanged**

A note on the second domain

You asked for relicompelevators.in to be compared against the primary site. That domain currently has no A record on its Bluehost nameservers, so it does not resolve to any website and could not be crawled. It does carry MX records, which is why support@relicompelevators.in still functions as an email address. The practical consequence is that there is no duplicate-content or canonical conflict between the two domains today — but the brand entity is split, because the email address published in your Organization and LocalBusiness schema sits on a domain that search engines and AI models cannot connect to your website.

Pages Audited

Thirty URLs were crawled on 21 September 2026: 18 indexable pages, 11 “Coming Soon” placeholder pages, and the two crawl directive files. Every finding in this report is drawn from the raw HTML of these pages.

URL	Type	Notes
/	Homepage	1,559 words. 12 JSON-LD blocks: Organization, WebSite, LocalBusiness, WebPage, 7 Reviews, FAQPage. Title 59 chars.
/about	About	847 words. Organization + WebPage + FAQPage + Breadcrumb. TeamSection wired but dormant until names are supplied.
/products	Product hub	1,364 words. WebPage + Speakable + FAQPage. Title 51, description 139.
/products/home-elevators	Product	1,798 words, deepest page on the site. Product schema. Shaft-width guidance now stated inline.
/products/mrl-elevators	Product	1,030 words, up from 873. Gained the MRL vs MR vs hydraulic comparison table.
/products/traction-elevators	Product	978 words, up from 869. Gained the traction vs hydraulic comparison table.
/products/hydraulic-elevators	Product	1,282 words. Title cut from 71 to 46 chars, description from 163 to 140.
/products/goods-lifts-dumbwaiters	Product	1,432 words. Title cut from 72 to 46 chars, description from 171 to 132.
/products/capsule-glass-elevators	Product	961 words. Title cut from 63 to 52 chars. All gallery images now carry alt text.
/services	Service hub	514 words. WebPage + Speakable + FAQPage added. Still the thinnest live hub.
/services/elevator-installation	Service	1,408 words, up from 1,132. HowTo with 8 steps, plus the new standards and compliance section.
/services/custom-elevator-manufacturing	Service	715 words. Service + AdministrativeArea + FAQPage. Title cut from 74 to 50.
/projects	Portfolio	1,094 words. WebPage + Speakable added. og:image now present.
/locations	Location hub	961 words. WebPage + Speakable + FAQPage. Title cut from 73 to 53.
/locations/bangalore	Location	1,027 words. LocalBusiness with verified geo coordinates, opening hours and aggregateRating.
/locations/mysore	Location	922 words, up from 519. Added buyer-guidance, regulatory and service-coverage sections.
/contact	Contact	260 words. ContactPage + LocalBusiness + geo + hours + WebPage. Phone number in meta corrected.

URL	Type	Notes
/llms.txt	AI crawler map	New. Generated from the publish registry, so unpublished pages cannot leak into it.
/robots.txt	Directive	Unchanged. Allow all, Host and Sitemap declared.
/sitemap.xml	Directive	19 URLs. lastmod now a deliberate review date instead of the build timestamp.
11 Coming Soon pages	**PLACEHOLDER**	Left in place by your instruction. Directive improved from noindex,nofollow to noindex,follow.

SEO Analysis

Score: **9/10** (was 7/10) · *Strong*

Search Engine Optimization - how well conventional crawlers can find, parse and rank the site.

Technical On-Page

Signal	Finding	Status
Title tags	All 17 live pages are now unique and under 60 characters, with the brand applied exactly once by the root layout template. The homepage went from 80 characters with a doubled brand to 59. The longest is now 59.	**Good**
Meta descriptions	All 17 are within the ~160-character display limit. The worst offender, /products at 184, is now 139. The contact description also had a phone number published that matched none of the real lines; it now carries the correct number.	**Good**
Heading hierarchy	Unchanged and already strong: exactly one descriptive H1 per page, logical H2/H3 nesting, now 87 question-phrased headings across the site.	**Good**
URL structure	Unchanged. Clean, lowercase, hyphenated, logically nested, no parameters.	**Good**
Canonical tags	Self-referencing canonical on every page, consistent with the sitemap form.	**Good**
Robots meta	17 live pages index,follow. The 11 placeholders changed from noindex,nofollow to noindex,follow: they still stay out of the index, but crawlers now walk their internal links back into the live site instead of dead-ending.	**Good**
Image alt text	Zero images now render alt="". The 32 gallery thumbnails take their alt from the slide label; the parent button keeps its aria-label, which overrides descendant text for screen readers, so this gains image search without double-announcing.	**Good**
Open Graph / Twitter	og:image is present on all 17 pages. The four pages that previously lost it (/about, /contact, /products, /projects) hand-rolled their metadata and omitted the images array; they now route through the shared builder.	**Good**
Internal linking	Unchanged and strong: 44-68 descriptive internal links per page.	**Good**
XML sitemap	19 URLs, correctly excluding all 11 noindex pages. lastmod is now a deliberate CONTENT_LAST_REVIEWED constant rather than new Date() at build time, which previously told crawlers the entire site changed on every redeploy.	**Good**

Signal	Finding	Status
robots.txt	Unchanged and correct. No crawler blocked.	Good
Legacy meta keywords	Removed from the shared metadata builder. The SeoFields.keywords field is retained as editorial intent for writers but is no longer emitted.	Good

Content Quality

Signal	Finding	Status
Total content volume	18,152 words across 17 live pages, up from 17,321. The growth is concentrated where it was thinnest rather than spread as padding.	Good
Thin pages	/locations/mysore went from 519 to 922 words, closing most of the gap to Bangalore's 1,027. /services remains the thinnest live page at 514 words.	Needs Attention
Unfulfilled content promises	Resolved. The homepage body and FAQ schema no longer promise a price guide that is not published; both now answer the cost question directly in terms of stops, capacity, shaft readiness and finish.	Good
Content freshness	Sitemap lastmod and WebPage dateModified both now read from a single explicit review date, so the freshness signal is deliberate and truthful rather than an artefact of deployment.	Good
Comparison content	Two real HTML comparison tables added with proper thead markup: MRL vs MR traction vs hydraulic, and traction vs hydraulic. Both are built from facts already stated in the page prose.	Good
Blog / resources	Still unpublished by your instruction. Six articles exist in the codebase, including the home lift price guide and AMC charges explainer, gated behind the publish registry.	Needs Attention

Structured Data

Signal	Finding	Status
Overall coverage	63 JSON-LD blocks across 30 distinct schema types, up from 44 blocks across 12. Every block parsed without error.	Good
Organization	Now carries logo as a sized ImageObject, full PostalAddress, areaServed for both states, two typed ContactPoints with language coverage, sameAs and aggregateRating. Logo presence is a prerequisite for knowledge-panel eligibility.	Good
LocalBusiness	Added to the homepage and /contact, which were previously bare. Includes verified GeoCoordinates resolved from the Google Business Profile place link, openingHoursSpecification for Mon-Sat 09:30-18:30 with Sunday explicitly closed, hasMap, and currenciesAccepted.	Good

Signal	Finding	Status
Review and rating markup	The 4.5/5 from 530+ Google reviews is now machine-readable as AggregateRating, with seven attributed Review nodes carrying reviewer names and individual ratings. Both read from the same testimonialStats object that renders the on-page strip, so markup cannot drift from what visitors see.	Good
Self-serving review caveat	Worth stating plainly: Google's rich-results policy discounts review markup a business publishes about itself, so star ratings may not appear in Google SERPs from this alone. The markup still materially helps AI answer engines, which have no equivalent restriction. Your Google Business Profile remains the route to SERP stars.	Needs Attention
Product schema	Present on all six product pages with name, description, brand, url and image. Still correctly emits no offers node, because pricesApproved remains false by your decision.	Needs Attention
HowTo	An 8-step HowTo now marks up the staged installation process, generated from the same installationSteps array the on-page timeline renders, so the two cannot diverge.	Good
BreadcrumbList	Unchanged, on every non-home page, with matching visible breadcrumbs.	Good

GEO Analysis

Score: **8/10** (was 6/10) · *Strong*

Generative Engine Optimization - how readily AI search engines such as Perplexity, ChatGPT Search, Google AI Overviews and Gemini can understand, trust and cite the site.

E-E-A-T Assessment

Signal	Finding	Status
Named authors / leadership	Still the single largest remaining gap. src/content/team.ts and a TeamSection component are wired and ready, and buildTeamPersonJsonLd emits Person nodes with jobTitle, credentials and knowsAbout, but the array is deliberately empty. Nothing renders and no Person schema is emitted until real, consented names are supplied.	Missing
Machine-readable trust	Substantially improved. The rating, review count, seven named reviewers, full postal address, verified coordinates and trading hours are now all in structured data rather than living only as rendered text.	Good
Experience evidence	Unchanged and strong: 16+ years, 600+ installations, named Magadi facility, seven verbatim customer accounts naming staff members.	Good
Credentials	Unchanged. ISO and safety compliance are claimed on /about without certificate numbers or issuing bodies, so the claims remain unverifiable to a reader or a model.	Needs Attention
Contact accessibility	Improved. Phone, WhatsApp, email and full head-office address were already visible; they are now also expressed as ContactPoint and PostalAddress nodes, and the incorrect phone number in the contact meta description has been corrected.	Good
Brand entity consistency	Unchanged by your decision. The published email remains support@relicompelevators.in, a domain with MX records but no A record. Email works; the entity stays split across two domains. Pointing an A record or 301 from the .in domain to the .com site would close this without changing the mailbox.	Needs Attention

Content for AI Synthesis

Signal	Finding	Status
External source citation	Closed. The installation page now cites the BIS IS 14665 series part by part, the National Building Code of India 2016 Part 8 Section 5, and the Karnataka Lifts, Escalators and Passenger Conveyors Act, 2012, including its in-force date and the 2025 amendment. Each was verified against primary sources rather than asserted from memory.	Good

Signal	Finding	Status
Citation-worthy framing	The new standards section explains which rulebook governs what: IS 14665 the machine, NBC the shaft and building, the Karnataka Act the licence to operate. That three-way distinction is genuinely useful, rarely stated by competitors, and exactly the shape an AI engine quotes.	Good
Dead-end answers	Closed. The homepage FAQ no longer directs readers to an unpublished AMC page or a price guide that does not exist. Both answers are now self-contained, so an engine citing them sends the user somewhere real.	Good
Factual density	Improved. Shaft width bands, the three-rulebook framing, Mysuru retrofit constraints and explicit trading hours were added, all traceable to the site's own data or to verified public standards.	Good
llms.txt	Added at /llms.txt, generated from the same publish registry that drives the navigation and sitemap, so an unpublished page cannot leak into it. It states the canonical host, NAP, coordinates, hours, rating, and an explicit note that Relicomp does not publish fixed prices.	Good
Original data	Still absent. No proprietary benchmarks, published ranges or research an engine would prefer to cite over a competitor. The six drafted articles are the obvious source once published.	Needs Attention

Technical GEO

Signal	Finding	Status
Server-side rendering	Unchanged. Next.js App Router delivers complete HTML including all new JSON-LD with JavaScript disabled.	Good
Entity graph consistency	Improved. Organization, WebSite, LocalBusiness, WebPage, Review and Person nodes now cross-reference by @id rather than repeating loose copies of the brand, so engines resolve one entity instead of several.	Good
HTTPS / security	Unchanged. HTTP/2 with two-year HSTS.	Good
AI crawler access	Unchanged. No directive blocks GPTBot, PerplexityBot, ClaudeBot, CCBot or Google-Extended.	Good

AEO Analysis

Score: **9/10** (was 7/10) · *Strong*

Answer Engine Optimization - eligibility for featured snippets, People Also Ask boxes and voice assistant responses.

Featured Snippet Eligibility

Signal	Finding	Status
Question-phrased headings	87 across the site, up from 85, including the new standards question on the installation page.	**Good**
Comparison tables	Closed. Two real HTML tables with thead markup now cover MRL vs MR vs hydraulic and traction vs hydraulic, making table snippets available for exactly the comparisons buyers search.	**Good**
Direct answer paragraphs	Unchanged and well-formed: FAQ answers resolve the question in the opening sentence at 35-60 words.	**Good**
List content	Unchanged, plus the installation process is now both a visible list and an 8-step HowTo.	**Good**

Structured Answer Formats

Signal	Finding	Status
FAQPage schema	On 16 of 17 live pages, unchanged and still the strongest single asset.	**Good**
HowTo schema	Closed. 8 steps with position, name, text and per-step URL fragments, driven by the shared installationSteps array.	**Good**
Speakable schema	Closed. SpeakableSpecification on six hub pages, targeting h1, .speakable-intro and .faq-answer. Those classes were added to the real components, so the selectors resolve to actual elements rather than pointing at nothing.	**Good**
ContactPage schema	Closed. /contact now carries ContactPage, LocalBusiness with geo and hours, and WebPage, where it previously had only BreadcrumbList.	**Good**

Voice Search Readiness

Signal	Finding	Status
Opening hours	Closed. openingHoursSpecification now covers Mon-Sat 09:30-18:30 with Sunday explicitly declared closed, so 'are they open now?' is answerable. Note that the site still claims 24/7 breakdown support in body copy while the schema publishes office hours; those describe different services, but the distinction should be made explicit on the page.	Needs Attention
Local intent coverage	Still limited to Bangalore and Mysore by your decision. Hassan, Udupi, Hospete, Kushalnagar, Chamarajanagara, Dindigul, Hennur and Jigani remain named as service cities on the homepage while their pages stay placeholders.	Needs Attention
NAP consistency	Improved. The one genuine inconsistency, a wrong phone number in the contact meta description, has been corrected. Name, address and phone now agree across page text, footer, schema and llms.txt.	Good
Long-tail question coverage	Improved. The home lift cost question is now answered with the four variables that drive it rather than deflected to an unpublished guide, though without a numeric range it will still lose the snippet to a competitor who publishes one.	Needs Attention

Priority Recommendations

Ordered by impact against effort. The two Critical items should be addressed before any other work, because they affect commercial pages that are already receiving internal link equity and are already cited by your own structured data.

Priority	Action	Dimension	Effort	Impact
	Send the leadership and engineering names, roles and short bios. team.ts, TeamSection and Person schema are all wired and dormant; populating the array switches the whole path on with no code change. This is the single biggest remaining GEO gain.	GEO	Low	**High**
High	Add an A record or 301 redirect from relicompelevators.in to the .com site so the published email domain resolves. DNS change on your side; it consolidates the brand entity for AI engines without touching the mailbox.	GEO	Low	**High**
Medium	Publish the six drafted articles, starting with the home lift price guide and AMC charges explainer. They are written and gated; publishing also unlocks a real answer to the highest-intent cost query.	SEO + GEO	Low	**High**
Medium	Attach certificate numbers and issuing bodies to the ISO and safety compliance claims on /about, or soften the wording. An unverifiable credential claim is a weak E-E-A-T signal.	GEO	Low	**Medium**
Medium	Clarify the 24/7 claim. Body copy advertises 24/7 breakdown support while schema publishes Mon-Sat office hours. State plainly which service each covers.	AEO	Low	**Medium**
Medium	Expand /services from 514 words. It is now the thinnest live page and acts as the hub for four services.	SEO	Medium	**Medium**
Medium	If and when commercial approval allows, set pricesApproved and supply priceRanges. The AggregateOffer code path already exists and is gated, so this is a content decision, not development.	SEO	Low	**Medium**
Low	Claim and maintain the Google Business Profile actively. Because on-site review markup is treated as self-serving, the profile is the route to star ratings in Google SERPs.	SEO + GEO	Low	**Medium**
	Release the eight placeholder location pages when ready. Until then the homepage names eight cities it cannot land a visitor on.	SEO + AEO	Medium	**Medium**
Low	Consider WebPage and Speakable nodes on the six product detail pages for parity with the hubs. Product schema is already correct there, so this is incremental.	AEO	Low	**Low**

What’s Working Well

These are genuine strengths observed directly in the crawl, not filler. Several of them put this site ahead of typical regional competitors in the same sector.

Strength	Evidence from the crawl
Complete on-page hygiene	Zero titles over 60 chars, zero descriptions over 160, zero duplicated brand suffixes, zero missing og:image, zero empty alt attributes, no legacy keywords tag. All 17 live pages clean.
Entity graph built properly	30 schema types cross-referenced by @id rather than duplicated. Organization, WebSite, LocalBusiness, WebPage, Review and Person all resolve to one coherent entity.
Earned trust made machine-readable	4.5/5 from 530+ Google reviews now emitted as AggregateRating with seven named Review nodes, sourced from the same object that renders the visible strip so the two cannot drift apart.
Verified location data	GeoCoordinates 12.9599728, 77.5310498 resolved from your own Google Business Profile link rather than guessed, paired with real trading hours and hasMap.
Authority citations that check out	IS 14665 parts 1-5, NBC 2016 Part 8 Section 5, and the Karnataka Lifts Act 2012 with its in-force date, each verified against primary sources before publication.
Schema that cannot drift	HowTo is generated from installationSteps, AggregateRating from testimonialStats, llms.txt from the publish registry. Markup is derived from the same data the page renders, so it stays true by construction.
Honest gating preserved	Person schema, TeamSection and Product offers all emit nothing while their source data is empty. The architecture makes shipping fabricated people or invented prices impossible by default.
Content grown where it was thin	Mysore 519 to 922 words, installation 1,132 to 1,408, MRL 873 to 1,030, traction 869 to 978. Growth targeted at the weakest pages rather than spread as filler.
Dead-end answers eliminated	The homepage FAQ no longer routes users or AI engines to an unpublished AMC page or a non-existent price guide.
Crawl budget recovered	Placeholder pages changed from noindex,nofollow to noindex,follow, so the crawler now returns into the live site instead of stopping at a stub.
A real NAP bug caught	The contact meta description advertised +91 95132-99022, a number matching none of the real lines. Corrected to the published number.
Comparison tables buyers actually search	MRL vs MR vs hydraulic and traction vs hydraulic, as real HTML tables built from facts already present in the page prose.

Glossary

Plain-English definitions of the terms used throughout this report.

SEO - Search Engine Optimization

Making a site easy for conventional search engines such as Google and Bing to crawl, understand and rank. Covers technical signals (titles, descriptions, canonical tags, sitemaps), content quality and structured data.

GEO - Generative Engine Optimization

Making a site easy for AI-powered search engines (Perplexity, ChatGPT Search, Google AI Overviews, Gemini) to understand, trust and cite. These engines synthesise an answer from several sources and name the ones they used, so they reward clearly stated facts, verifiable authority, consistent entity signals and machine-readable structured data.

AEO - Answer Engine Optimization

Formatting content so a search engine or voice assistant can lift a direct answer straight out of the page. Depends on question-phrased headings, concise 40-60 word answers, lists, comparison tables, and FAQPage or HowTo schema.

E-E-A-T

Experience, Expertise, Authoritativeness and Trustworthiness: Google's framework for assessing content credibility. It matters most for topics affecting health, safety or money. Elevators are safety-critical and high-value, so named engineers and verifiable certifications carry real weight.

Schema markup (JSON-LD)

A block of structured data embedded in a page that tells search engines explicitly what the page describes. Invisible to visitors, but it is what makes star ratings, FAQ dropdowns and business panels appear in search results.

AggregateRating

The schema.org property expressing an average rating and how many reviews it came from. Note that Google discounts ratings a business publishes about itself, so it drives AI citations more reliably than SERP stars.

SpeakableSpecification

Schema marking which parts of a page a voice assistant should read aloud, identified by CSS selector. The selectors must match real elements on the page to have any effect.

noindex vs nofollow

noindex keeps a page out of the search index. nofollow stops crawlers following links out of it. For a placeholder that stays in the navigation, noindex,follow is better: it stays unindexed while still letting crawlers return into the live site.

llms.txt

An emerging plain-text convention, analogous to robots.txt, describing a site's structure and key facts for AI crawlers and answer engines.

NAP

Name, Address, Phone: the three data points that must stay identical across a website, Google Business Profile and every directory listing. Inconsistency directly weakens local search rankings.
